Jaime Jiménez

Master Researcher, Ericsson Research · Agentic AI protocols

jaime.jimenez@ericsson.com
jaime.win
Espoo, Finland

PROFILE

Master Researcher at Ericsson Research working on agentic AI protocols: how LLM-based agents discover, authenticate and act across networks, APIs and devices. The same discovery, identity and device-management problems I worked on for the IoT in CoRE and LwM2M, now for agents at the IETF and the Agentic AI Foundation (MCP, A2A). 17 years taking protocol research into standards, patents and running code.

HIGHLIGHTS

- **Ericsson Key Contributor Award 2025**, top 10% of performers in the Ericsson Group.
- **About 90 granted patents**; 26 invention disclosures since 2025, about half on agentic AI.
- **IETF CoRE Working Group co-chair since 2016**; 2 RFCs and 22 Internet-Drafts.
- **Co-author of OMA LwM2M**, deployed on hundreds of millions of devices and referenced by 3GPP, GSMA eSIM, IIC and GlobalPlatform.
- **Agent Directory**: Internet-Draft, live service and open-source release (MIT), being merged with Google's Agent Resource Discovery into one draft for IETF 127.

EXPERIENCE

Master Researcher, Agentic AI

2023 – Present

Ericsson Research

- **Agent discovery.** Specified the Agent Directory, a registry for A2A, MCP and HTTP agents with soft-state registration modelled on the CoRE Resource Directory (RFC 9176) and lookup by capability; wrote the IETF survey of agent discovery mechanisms. Built the implementation (live at ad.jaime.win since March 2026, open source since September 2026, MIT). Spoke at the IETF DAWN BoF (July 2026, about 325 attendees). Merging it with Google's Agent Resource Discovery for IETF 127: weekly sessions with Google since August 2026, writing the merged draft and a Rust implementation.
- **Network APIs for agents.** Built the Vonage MCP server (2025) and a CAMARA sandbox exposing 94 network APIs to agents (RFC 9727 API catalog, MCP, HTTP Events Query passing the conformance client 33/33 at the IETF 126 Hackathon), now Ericsson's working reference for agent-facing exposure in the 6G studies. Showcased at the Ericsson Technology Conference 2025; co-author of the Ericsson blog post Network APIs for AI agents and the Vonage developer integration guide.
- **Agent identity.** Prototyped WIMSE workload identity for agents (discovery plus authenticated registration). Invention disclosures on SIM-derived WIMSE credentials, agent credentials bound to carrier-verified phone numbers (with Vonage), identity-based MCP tool provisioning, passkey-delegated accountability and A2A push tracing.
- **Agentic IoT and networks.** Built ReAct agents that operate constrained CoAP devices with no device-side changes, written up as draft-jimenez-t2trg-iot-agent (6G Value Expansion seminar, June 2025). Built an MCP layer over Ericsson's Transport Automation Controller for network diagnosis and remediation (LMF Demo Carousel, February 2026).
- **Strategy and standards.** Co-owner of Ericsson's Statement of Direction on agentic AI underlying technologies (AAIF, MCP, A2A, IETF). Wrote and presented the MCP, A2A and IETF protocol-stack analysis for the BCSS 6G study on AI protocols for exposure (3 sessions, autumn 2026), input to Ericsson's position in the 3GPP CT3 6G studies. Participant in the Agentic AI Foundation Identity and Trust working group and in A2A Technical Steering Committee calls.
- **Talks and teaching.** Guest lecture *Building AI Agents for the Internet of Things* at HKUST Guangzhou, Tampere University, University of Helsinki and UNICAMP (2026). Speaker at IRTF RASPRG, IETF 126, on AI-usage signals in Internet-Drafts.

Master Researcher, Web and IoT 2018 – 2022

Ericsson Research

- Co-author of OMA LwM2M and IPSO Objects, OMA DMSO Working Group co-chair 2017–2024; Ericsson's contact for the IETF CoAP standardization strategy; co-author of the Industrial Internet Consortium Connectivity Framework.
- Led, with Ericsson's IPR department, the creation of Ericsson's non-3GPP device IPR portfolio over IETF and OMA standards.
- IoT and Web prototypes shown at Ericsson and MWC; H2020 and EIT-HII projects; student supervision.

Senior Researcher and System Architect, IoT Accelerator 2008 – 2018

Ericsson Research

- Architect and developer in the IoT Accelerator unit; IoT device management research. Authored RFC 7650 (CoAP usage for RELOAD, 2015). Low-power IoT and Capillary Networks demo at MWC 2015; FP7 COMMUNE and MAMMOTH projects.

STANDARDS AND OPEN SOURCE

- **IETF.** CoRE Working Group co-chair since 2016; author of RFC 7650, RFC 8477 and the CoAP publish-subscribe architecture (draft-ietf-core-coap-pubsub); IANA Expert Reviewer for the CoAP registries.
- **Open source.** Agent Directory (Ericsson Research, MIT), CoAP publish-subscribe broker, HTTP Events Query client. Public services: ad.jaime.win, camara.jaime.win.

EDUCATION

M.Sc. Communications Systems, Security and Mobile Computing 2009 – 2011

KTH Royal Institute of Technology, Stockholm

NordPlus Scholarship. Thesis: Adapting a DHT to a Self-Reliant M2M Network.

Computer Engineering 2003 – 2007

Carlos III University, Madrid

Thesis: Implementation and performance of RELOAD.

SIDE PROJECTS

- **23signs**, own IT consultancy (2026). ytj.23signs.org: the full Finnish Trade Register (PRH open data, daily refresh) on Cloudflare Workers and D1, with a search UI and, for agents, OpenAPI, a hosted MCP server, discovery documents and paid batch access over x402: the same agent-facing exposure pattern as the Ericsson work. Also vero.23signs.org (public tax records) and fi.23signs.org (Statistics Finland map).
- Co-owner of Capperi Oy, two Napoletana pizzerias in Helsinki (since 2016).
