Profile

Researcher in Agentic AI and Internet protocols with 17 years at Ericsson Research. Since 2023 I work on the technologies that let AI agents find, trust and act on networks, APIs and IoT devices: agent discovery, agent identity and authorization, and agent-ready exposure of network capabilities. I take that research into IETF drafts and open source, into patents, and into prototypes used with Ericsson business units and partners such as Vonage and Google. IETF CoRE Working Group co-chair since 2016.

Employment

Master Researcher - Agentic AI, Ericsson Research January 2023 - Present

- Research lead for agentic AI underlying technologies at Ericsson Research; co-owner of the Ericsson Statement of Direction covering the Agentic AI Foundation (AAIF, Linux Foundation), its MCP and A2A protocols, and the IETF agent work, and organizer of the company-wide MCP stakeholder gathering (2026).
- Agent discovery: author of draft-jimenez-agent-directory and the agent discovery survey at the IETF; released the Agent Directory reference implementation as open source (MIT, 2026); co-lead of the joint Google and Ericsson work aligning it with Google's Agent Resource Discovery (ARD) for IETF 127.
- Agent identity and trust: Ericsson contributor in the AAIF (Linux Foundation) Identity and Trust working group and in the A2A Technical Steering Committee calls; WIMSE-based agent identity prototypes; co-inventor with Vonage of mechanisms binding agent workload credentials to SIM and carrier-verified subscriber identity.
- Agent-ready network APIs: built a CAMARA sandbox exposing telecom network APIs to agents (RFC 9727 API catalog, ARD manifest, MCP, HTTP Events Query), used as reference for agent-facing exposure in the 6G exposure studies; HTTP Events Query implementation passed the author's conformance suite at the IETF 126 Hackathon.
- Agentic AI for IoT and networks: ReAct agents operating constrained CoAP devices without device-side changes (draft-jimenez-t2trg-iot-agent); agentic layer over the Ericsson Transport Automation Controller via MCP for network diagnosis and remediation (2026).
- Vonage and MCP: implemented the Vonage MCP server exposing CPaaS and network APIs to agents; demos to BCSS, EVCN, BNEW and Vonage (2025) and a showcase at the Ericsson Technology Conference 2025; co-author of the Ericsson blog post Network APIs for AI agents (2025).
- 3GPP and 6G: presented the agentic AI protocol stack (MCP, A2A, IETF identity and discovery) to the BCSS 6G study on AI protocol candidates for exposure (2026), input to Ericsson's position in the 3GPP CT3 6G AI protocol and exposure studies.
- IPR: 26 invention disclosures submitted or filed since 2025, about half on agentic AI (agent identification, delegated accountability, intent-drift detection, MCP tool provisioning, model attestation); host of cross-unit patent workshops.
- Recipient of the Ericsson Key Contributor Award 2025, recognizing the top 10% of performers across the Ericsson Group.

Master Researcher - Web and IoT, Ericsson Research April 2018 - December 2022

- Expert on IoT and Web protocols for Ericsson business units (BDGS, BTEB), standardization and academia; prototypes and demos at Ericsson, MWC and other venues.
- Ericsson contact for the IETF CoAP standardization strategy and, as OMA DMSO co-chair (2017-2024), for the LwM2M device management strategy. LwM2M and IPSO Objects co-author; LwM2M runs on hundreds of millions of devices and is referenced by 3GPP, GSMA eSIM, IIC and GlobalPlatform. Co-author of the Industrial Internet Consortium Connectivity Framework.
- Led with IPRL the creation of Ericsson's non-3GPP device IPR portfolio covering IETF and OMA standards.
- Contributed to and coordinated European and Finnish initiatives (H2020, EIT-HII), supervising students and colleagues.

Senior Researcher / System Architect IoT Accelerator, Ericsson Research December 2008 - March 2018

- Led IoT and IoT device management research; architect and developer in Ericsson's IoT Accelerator unit.
- Low-power IoT and Capillary Networks demo at MWC 2015; coordinated EU and national projects (FP7 COMMUNE, MAMMOTH).

Standards and Open Source

- IETF CoRE Working Group co-chair since 2016. Author of RFC 7650 and RFC 8477 and of the CoAP publish-subscribe architecture (draft-ietf-core-coap-pubsub). IANA Expert Reviewer for CoAP registries; IETF ART and IoT Directorate reviewer.
- Agentic AI standards: IETF DAWN, WIMSE, OAuth, HTTPAPI and AIPREF participant; AAIF Identity and Trust working group and A2A TSC; IETF Hackathon implementations of agent discovery, bot authentication and Events Query (IETF 123 to 126).
- Open source: Agent Directory (Ericsson Research, MIT), CAMARA MCP server and agent-ready sandbox, CoAP PubSub broker, WIMSE agent identity demo.

Selected Talks and Lectures

- Guest lectures, *Building AI Agents for the Internet of Things*: HKUST Guangzhou (March 2026), Tampere University and University of Helsinki (April 2026), UNICAMP SMARTNESS seminar, Brazil (May 2026).
- IRTF RASPRG, IETF 126 Vienna (July 2026): analysis of AI-usage signals in Internet-Drafts.
- Ericsson Technology Conference 2025 showcase; Ericsson debrief of AGNTCon and MCPCon Europe 2026 (AAIF).
- Ericsson enlightening seminars: agentic AI for IoT (6G Value Expansion, June 2025); AI protocols at the IETF, MCP and A2A (ITAS, November 2025); agentic AI protocol stack for 3GPP (BCSS 6G study, 2026).

Education

Royal Institute of Technology (KTH), Stockholm, Sweden 2009 - 2011

- Master's programme "Communications Systems, Security and Mobile Computing": Advanced Internetworking, Internet Security and Privacy, ICT Entrepreneurship and Venture Creation, Network Services, Advanced Routing, Management of Networked Systems, Security in Mobile and Wireless Networks.
- NordPlus Scholarship (2010-2011), funded by the Nordic Council of Ministers.
- *Thesis: Adapting a DHT to a Self-Reliant M2M Network* - urn:nbn:se:kth:diva-44293

Carlos III University, School of Computing, Madrid, Spain 2003 - 2007

- Graduate Computer Engineer, Major: Programming.
- *Thesis: Implementation and performance of REsource LOcation And Discovery (RELOAD)* - pdf
