Profile

Researcher on agentic AI protocols at Ericsson Research: how AI agents discover, authenticate and act across networks, APIs and devices. Seventeen years taking protocol research into standards, patents and products: about 90 granted patents, IETF CoRE Working Group co-chair since 2016, co-author of LwM2M, which runs on hundreds of millions of devices.

Highlights

- **Ericsson Key Contributor Award 2025**, top 10% of performers in the Ericsson Group.
- **About 90 granted patents**; 26 invention disclosures since 2025, half of them on agentic AI.
- **IETF CoRE Working Group co-chair** for ten years; two RFCs and over 20 Internet-Drafts.
- **Co-author of LwM2M and IPSO**, referenced by 3GPP, GSMA and GlobalPlatform.
- **Agent Directory**: IETF specification and open-source implementation, now merged with Google's Agent Resource Discovery.

Experience

Master Researcher, Agentic AI 2023 - Present
Ericsson Research

- Agent discovery. Specified the Agent Directory, a registry with soft-state registration and capability lookup for A2A, MCP and HTTP agents, and wrote the IETF survey of discovery mechanisms. Built the reference implementation (open source, MIT). Merging it with Google's Agent Resource Discovery into one specification for IETF 127.
- Agent identity. Prototyped WIMSE workload identity for agents (discovery plus authenticated registration). Invented, with Vonage, bindings of agent credentials to the SIM and to carrier-verified phone numbers.
- Network APIs for agents. Built the Vonage MCP server and an agent-ready CAMARA sandbox (RFC 9727 API catalog, MCP, HTTP Events Query, conformance-tested at the IETF 126 Hackathon). Demos to BCSS, BNEW, EVCN and Vonage, Ericsson Technology Conference 2025, Ericsson blog post Network APIs for AI agents.
- Agents on infrastructure. ReAct agents operating constrained CoAP devices with no device-side changes (IETF draft); an agent layer over Ericsson's Transport Automation Controller via MCP for network diagnosis and remediation.
- Technical authority on agent protocols for Ericsson: co-owner of the Statement of Direction on MCP, A2A and the IETF agent work; author of the MCP, A2A and IETF stack analysis behind Ericsson's 6G AI-protocol position in 3GPP CT3. Agentic AI Foundation Identity and Trust working group and A2A TSC; IETF DAWN, WIMSE, OAuth, HTTPAPI.
- Guest lectures on building AI agents for the IoT: HKUST Guangzhou, Tampere University, University of Helsinki, UNICAMP (2026). IRTF RASPRG speaker, IETF 126.

Master Researcher, Web and IoT 2018 - 2022
Ericsson Research

- Co-author of LwM2M and IPSO Objects at OMA, DMSO co-chair 2017-2024; owner of Ericsson's CoAP standardization strategy; co-author of the Industrial Internet Consortium Connectivity Framework.
- IoT and Web prototypes and demos (Ericsson, MWC, Vonage). Built with IPRL Ericsson's non-3GPP device IPR portfolio over IETF and OMA standards. H2020 and EIT-HII projects, student supervision.

Senior Researcher and System Architect, IoT Accelerator 2008 - 2018
Ericsson Research

- IoT device management research; architect and developer in the IoT Accelerator unit. Low-power IoT and Capillary Networks demo, MWC 2015. EU projects FP7 COMMUNE and MAMMOTH.

Standards and Open Source

- IETF: CoRE Working Group co-chair since 2016; author of RFC 7650, RFC 8477 and the CoAP publish-subscribe architecture (draft-ietf-core-coap-pubsub); IANA Expert Reviewer for CoAP registries.
- Open source: Agent Directory (Ericsson Research, MIT), CAMARA MCP server and sandbox, CoAP PubSub broker, WIMSE agent identity demo.

Education

M.Sc. Communications Systems, Security and Mobile Computing 2009 - 2011
KTH Royal Institute of Technology, Stockholm

NordPlus Scholarship. Thesis: Adapting a DHT to a Self-Reliant M2M Network.

Computer Engineering 2003 - 2007
Carlos III University, Madrid

Thesis: Implementation and performance of RELOAD.

Side Projects

- **23signs**, own IT consultancy (2026): ytj.23signs.org, a search and API service over Finland's full Trade Register (refreshed daily from PRH open data, Cloudflare Workers and D1) built for people and for AI agents alike: OpenAPI, hosted MCP server, agent discovery documents and agent payments over x402. Also vero.23signs.org (public tax records) and fi.23signs.org (Statistics Finland map).
- Co-owner of Capperi Oy, two Napoletana pizzerias in Helsinki (since 2016).
