Profile

Lead researcher on agentic AI protocols at Ericsson Research. I set Ericsson's direction on how AI agents discover, authenticate and act across networks, APIs and devices, and I represent the company where those standards are written: the IETF and the Agentic AI Foundation (Linux Foundation). Seventeen years of taking protocol research to standards, patents and products, from IoT to AI agents: about 90 granted patents, IETF CoRE Working Group co-chair since 2016, co-author of specifications running on hundreds of millions of devices.

Highlights

- Ericsson Key Contributor Award 2025, top 10% of performers in the Ericsson Group.
- About 90 granted patents; 26 invention disclosures since 2025, half of them on agentic AI.
- Ten years chairing the IETF CoRE Working Group; author of two RFCs and over 20 Internet-Drafts.
- Co-author of LwM2M and IPSO, deployed on hundreds of millions of devices and referenced by 3GPP, GSMA and GlobalPlatform.
- Open-sourced Ericsson's Agent Directory and lead the joint Google and Ericsson agent discovery work for the IETF.

Employment

Master Researcher, Agentic AI, Ericsson Research 2023 - Present

- Set Ericsson's direction on agentic AI protocols as co-owner of the Statement of Direction on MCP, A2A and IETF agent standards; convened the company-wide MCP stakeholder gathering across GFTL, business units and Vonage.
- Represent Ericsson in the Agentic AI Foundation (Identity and Trust working group, A2A Technical Steering Committee) and in the IETF agent work (DAWN, WIMSE, OAuth, HTTPAPI).
- Defined agent discovery at the IETF: author of the Agent Directory draft and the discovery landscape survey; released the reference implementation as open source; lead the Google and Ericsson collaboration merging it with Google's Agent Resource Discovery for IETF 127.
- Brought network APIs to AI agents: built the Vonage MCP server and an agent-ready CAMARA sandbox; demos to BCSS, BNEW, EVCN and Vonage, showcase at the Ericsson Technology Conference 2025, and the Ericsson blog post Network APIs for AI agents.
- Shaped Ericsson's 3GPP position on 6G AI protocols: presented the MCP, A2A and IETF stack to the BCSS 6G study on AI protocol candidates for exposure, input to the CT3 6G studies.
- Put agents on real infrastructure: ReAct agents operating constrained CoAP devices with no device changes (IETF draft); agentic operation of the Ericsson Transport Automation Controller over MCP; WIMSE-based agent identity, with inventions binding agent credentials to SIM and carrier-verified identity (with Vonage).
- Established with the IPR department how Ericsson handles agentic-protocol inventions; host of cross-unit patent workshops.
- Guest lecturer on building AI agents for the IoT at HKUST Guangzhou, Tampere University, University of Helsinki and UNICAMP (2026); speaker at IRTF RASPRG, IETF 126; Ericsson enlightening seminars on agentic AI (2025, 2026).

Master Researcher, Web and IoT, Ericsson Research 2018 - 2022

- Ericsson's expert and standards lead for IoT protocols: IETF CoAP strategy, OMA LwM2M strategy as DMSO co-chair (2017-2024), co-author of LwM2M, IPSO Objects and the Industrial Internet Consortium Connectivity Framework.
- Led with IPRL the creation of Ericsson's non-3GPP device IPR portfolio over IETF and OMA standards.
- Guided business units (BDGS, BTEB), Vonage and academia; prototypes and demos at Ericsson, MWC and other venues; coordinated H2020 and EIT-HII projects and supervised students.

Senior Researcher and System Architect, IoT Accelerator, Ericsson Research 2008 - 2018

- Led IoT device management research; architect and developer in the IoT Accelerator unit.

- Low-power IoT and Capillary Networks demo at MWC 2015; coordinated EU projects (FP7 COMMUNE, MAMMOTH).

Standards and Open Source

- IETF: CoRE Working Group co-chair since 2016; author of RFC 7650, RFC 8477 and the CoAP publish-subscribe architecture; IANA Expert Reviewer; ART and IoT Directorate reviewer; regular Hackathon participant on agent discovery, bot authentication and HTTP Events Query.
- Agentic AI: Agentic AI Foundation Identity and Trust working group and A2A TSC; IETF DAWN, WIMSE, OAuth, HTTPAPI, AIPREF.
- Open source: Agent Directory (Ericsson Research, MIT), CAMARA MCP server and sandbox, CoAP PubSub broker, WIMSE agent identity demo.

Education

KTH Royal Institute of Technology, Stockholm. M.Sc. Communications Systems, Security and Mobile Computing, 2009-2011. NordPlus Scholarship. Thesis: Adapting a DHT to a Self-Reliant M2M Network.

Carlos III University, Madrid. Computer Engineering, 2003-2007. Thesis: Implementation and performance of RELOAD.

Side Projects and Other

- **23signs**, own IT consultancy (2026): ytj.23signs.org, a search and API service over Finland's full Trade Register (refreshed daily from PRH open data, Cloudflare Workers and D1) built for people and for AI agents alike: OpenAPI, hosted MCP server, agent discovery documents and agent payments over x402. Also vero.23signs.org (public tax records) and fi.23signs.org (Statistics Finland map).
- Co-owner of Capperi Oy, two Napoletana pizzerias in Helsinki (since 2016).
- **Patents:** Google Patents. **Publications:** Google Scholar. **References:** on request. **Languages:** Spanish (native), English (C2), Italian (C2), German (C1).
